SAVE  
UP TO  
**80%**  
OF YOUR  
TIME

**Quick. Easy. Reliable**

Thanks to the Viega cold-press technology, pipes are connected in just **three steps**. This means that work can be carried out quickly: without much physical effort or time-consuming preparation. And it generates more sales. Viega press technology users are already on the next construction site while others are still soldering or welding.

CONNECT  
**ALL  
TYPES  
OF  
PIPES**

**One press system, all possible options**

Whether for drinking water, cooling, gas or heating pipes – Viega press connectors are suitable for **almost all applications** and offer a complete range of materials: from steel and stainless steel through to copper with gunmetal or silicon bronze.

# 0%

# FIRE RISK

## No fire hazard means working safer

Fire prevention measures and cooling times are a thing of the past with Viega's cold-press technology. Because where there is no need for an open flame, there can be no fire.

## Guaranteed safety: Viega SC-Contur

Thanks to the SC-Contur developed by Viega, accidentally non-pressed connections become visible during pressing. And because the press gun presses both in front of and behind the notch, all connections are durable **and permanently torsion-proof**.
